

Hotspot (Sprint Coolpad Surf)

Getting Started

A mobile hotspot is a device that provides wifi in areas that do not have wired internet. This quick sheet provides directions on connecting a device to a Sprint Coolpad Surf mobile hotspot.

Basic Setup

The hotspot box contains an instruction manual, the hotspot, and a power adapter (with power cord). The manual contains useful information on using the hotspot.

1. The hotspot has a power button on its front face:

2. To power on the hotspot, hold the power button for at least 3 seconds (until all four lights turn green). To power off the hotspot, hold the power button for at least 3 seconds (until all four lights turn green). It may take the hotspot a few seconds to shut down (all four lights turn off).

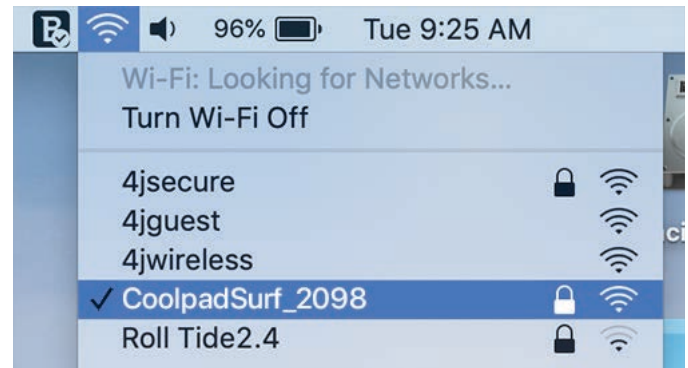

Connect a Laptop / iPad to the Hotspot

1. Power on the hotspot and wait for it be ready.
2. Look on the hotspot's box or on the hotspot's back to see the name of the hotspot's wifi signal (SSID):

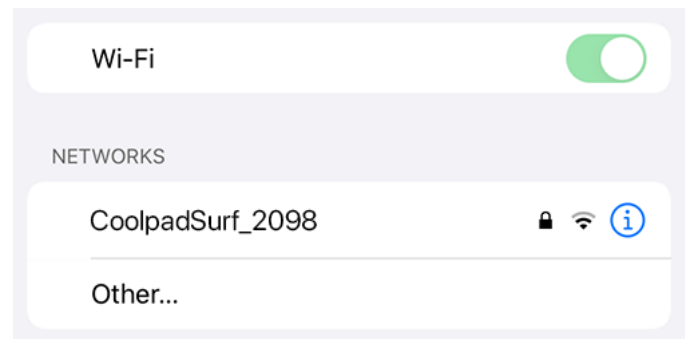

In this example, the wifi signal is named "CoolpadSurf_2098".

3. Connect your device to the hotspot's wifi signal. Mac laptop example:

iPad example:

4. Your device will prompt you to enter the password for the hotspot's wifi signal. Look on the hotspot's box or on the hotspot's back to see the wifi password:
