

# Hotspot (Verizon Ellipses Jetpack)

## Getting Started

A mobile hotspot is a device that provides wi-fi in areas that do not have wired internet. This quick sheet provides directions on connecting a device to a Verizon Ellipses Jetpack mobile hotspot.

## Basic Setup

The hotspot box contains an instruction manual, the hotspot, and a power adapter (with power cord). The manual contains useful information on using the hotspot.

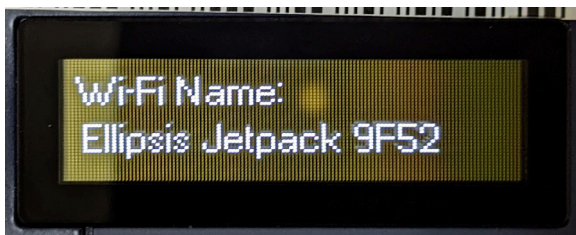

1. The hotspot has a power button on its front edge:

2. To power on the hotspot, hold the power button. To power off the hotspot, hold the power button.
3. Push the power button (press and release) to cycle through information on the hotspot screen.

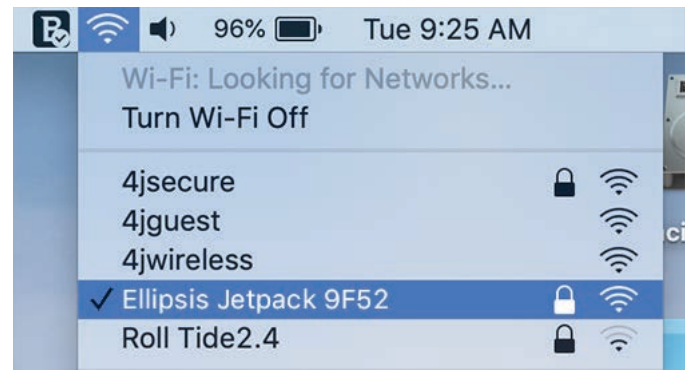

## Connect a Laptop / iPad to the Hotspot

1. Power on the hotspot and wait for it be ready.
2. Push the power button until the screen displays “Wi-Fi Name”:

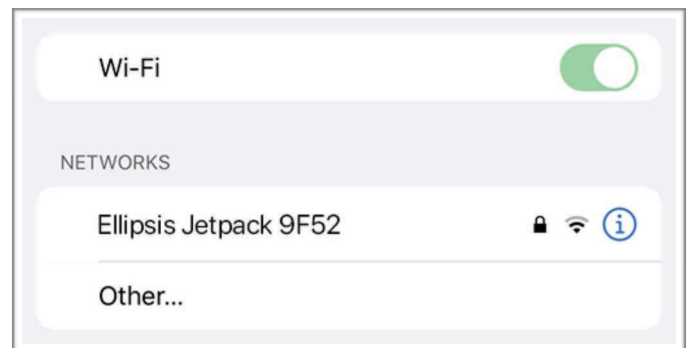

This screen shows the wi-fi signal to which you will connect your device. In this example, the wi-fi signal is named “Ellipsis Jetpack 9F52”.

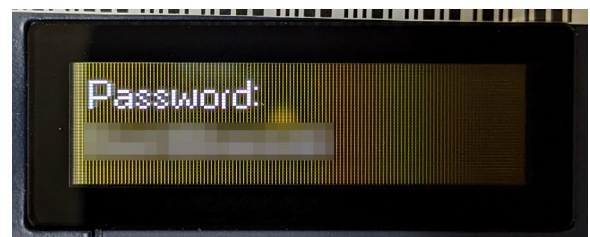

3. Connect your device to the hotspot’s wi-fi signal.  
Mac laptop example:

iPad example:

4. Your device will prompt you to enter the password for the hotspot’s wi-fi signal. On the hotspot, push the power button until the screen displays “Password”:

This screen displays the password for the hotspot’s wi-fi signal. Enter this password into the prompt on your device.
