

iPad: Set Do Not Disturb

Getting Started

This document shows how to make an iPad “sleep” during the night.

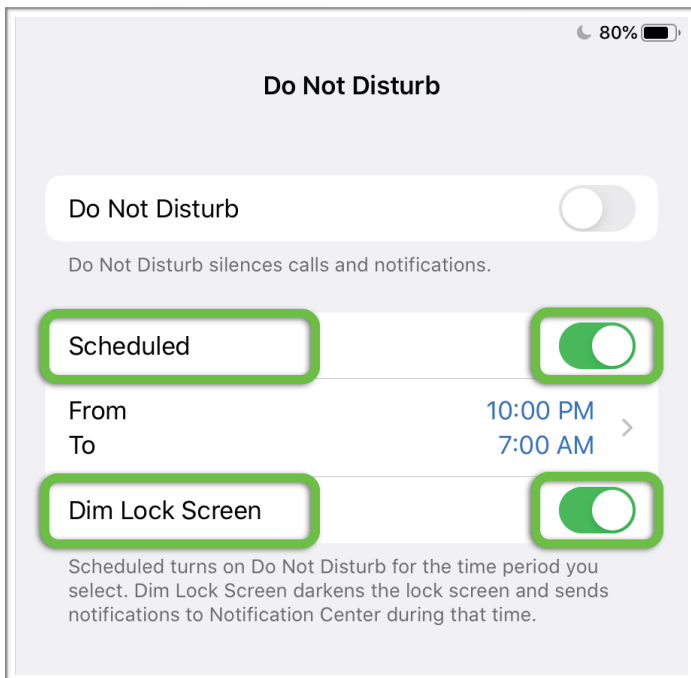

1. Find the “Settings” App and tap it to open it:

2. On the left side, find and tap “Do Not Disturb”:

3. On the right side, find “Scheduled” and “Dim Screen”:

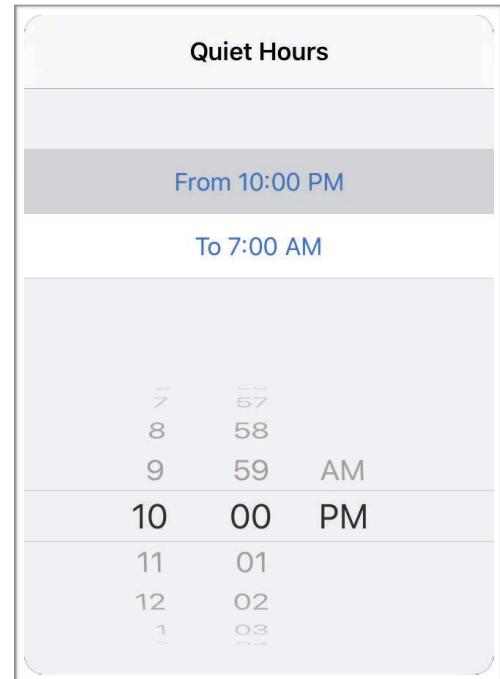

Tap the switch next to both “Scheduled” and “Dim Screen” to turn them on (green) or off (gray). Tap the switches so that they are on (green).

4. Tap the “From” and “To” area to set the hours for the iPad to sleep and wake:

Tap “From” to set the time at which the iPad will go to sleep. Swipe the hours / minutes up or down to increase or decrease the time. In the same manner, tap “To” to set the time at which the iPad will wake:

For example: set “From” to 10:00 PM to make the iPad go to sleep at 10:00 each night, set “To” to 7:00 AM to make the iPad wake up at 7:00 each morning.
